I've setup several template emails that are the custom format. I'd like to be able to choose this template from a lead and edit before sending. Right now when I click the custom template it doesn't allow me to edit like I can when the template is Text or HTML (letterhead). I really just want to send an HTML email without a letterhead but that isn't an option and I don't want to send plain text. Is there a way to do this? Any help would be great! 1 You can change an email you are sending to one individual right at the contact record. But if you want to edit an email template so that future emails using this template will get a different template, start with Setup and go into the template itself. 1. Many email templates are stored in the Unfiled Public Email Templates folder. Be sure to file yours where it makes the most sense. 2. Click on the email you want to edit. For instance, if we want to add the contact's name to the email, we'd first go to Contact Fields in the dropdown. 1. Create the text you want to appear and then paste the merge field formula-- don't forget the comma after the name! 2. Click Save. 1. Click Test and Verify Merge Fields. 2. Add a contact name, so the new merge field will be tested. 3. Relate the record to an organization. 4. Make sure to click the box to send the email preview to yourself. 5. Click OK. Note that it includes the merge field we created, but also the other merge fields that were included in the template. Search for an answer or ask a question of the zone or Customer Support.
